# Technical Data

## SUPER SHINE

BURNISHING COMPOUND

### DESCRIPTION

SUPER SHINE is designed with heavy chelating agents to improve the surface of the part as well as provide a nice deep shine. Chelating agents chemically react with metals to form water-soluble complex molecules. Unlike acid burnishing compounds that are usually run in steel media, alkaline burnishing compounds can be run with ceramic or plastic media. It imparts very light, bright colors to aluminum, brass, copper, & steel and can be used on all media, including steel. SUPER SHINE is particularly good for aluminum, aluminum castings or extrusions.

### USES / BENEFITS

- Extremely economical
- Saves Time, Saves Money
